

The image features two ICAPAK hiking shoes on a rocky, mountainous terrain. The shoe on the left is grey with yellow laces and a white sole. The shoe on the right is red with red laces and a red sole. Both shoes have a mesh upper and a rugged sole. The background consists of rocks and dry grass. A semi-transparent banner with the ICAPAK logo and text is overlaid on the right side of the image.

# ICAPAK

SHOES – SS25

**A.W.S. WATERPROOF** footwear blocks out water completely. The waterproof membrane construction with taped seams provides 360° protection from rain and all other moisture.

Next to the waterproof membrane, there is a porous foam layer, which enables the evaporation of the moisture. Closest to the foot, there is a pleasantly soft polyamide lining that provides comfort with every step.

**A.W.S.**

**WATER-RESISTANT**

**A.W.S. WATER-RESISTANT** footwear has been treated with a hydrophobic finish that prevents light drizzle and moisture from entering the shoe.

The water-resistant treatment also enables the upper materials to dry faster.
